Carpet and Upholstery Equipment Verification

Work, Money & Place | Required technical reading update | Checked November 21, 2026

Read this update alongside the existing complete course, workbook and worked case. The references below identify those reading-copy pages; this supplement does not repaginate them. Courses are free. This documentary review is not a physical test or a release of the selected operation.

Current status

UPHOLSTERY NOT READY

Exact identity and revision

BISSELL Commercial BG10 with 30G3 hose and upholstery tool. Historical manufacturer guide: 10N2 series, Part 120-4358, Rev 7/11. Carpet formula: BISSELL 31B6, 128 fl oz, UPC 011120059236; manufacturer SDS 31B6/31B61 effective January 20, 2023. Actual machine serial/build, accessory revision, bottle label and cap calibration have not been inspected.

Confirmed by primary documents

The current BG10 model page and 30G3 accessory page confirm compatibility. The model-page upholstery guide describes clockwise small solution and larger suction connections, trigger application and trigger-released recovery. The historical guide's printed page 5 specifies two marked clean-tank-cap measures per marked water fill. That instruction does not establish a fluid-ounce conversion or current label/cap match. The Crypton Home extraction subsection uses clear water for the separately identified compatible fabric lane; it does not authorize a 31B6 upholstery recipe.

Evidence still missing

The current BG10 and BG10-KIT User Manual links open specification brochures. A matching current complete operating guide, actual 31B6 dosing label, cap/fill-mark reconciliation, approved removal of carpet formula from the tank and accessory supply line, and a prescribed controlled upholstery pickup test remain unconfirmed. The case's 24 fl oz is a stock-cost assumption, not a mixing instruction. An SDS identifies hazards and handling, not the missing dosing recipe.

Physical verification and permitted next check

NOT PERFORMED. No actual unit, connection/leak check, cap measurement, spray/recovery test, line-clearing demonstration, fabric test or dry-down was inspected. After the applicable procedure is established, a competent cleaner must supervise authorized compatible practice and record actual results. Do not invent a bucket test, flush volume or pass threshold, or borrow instructions from another Big Green model.

Effect on the teaching case

Case C remains a conditional paper order. Documentary compatibility confirmation does not validate the combined upholstery method, water ledger, dosing assumption or a real customer's furniture. Its prices and costs are unchanged; no field outcome is claimed.

Where this update applies

Current complete-course PDF: L03 pp. 5-6; L06 pp. 9-10; L07 pp. 11-13; L09 pp. 15-17; L10 pp. 17-18. Workbook F09 pp. 12 and 28. Worked Case C pp. 1-4. These references identify the existing reading copies; read them with this verification update.

Primary sources and exact sections

Manufacturer webpages are unpaginated where stated. A historical manufacturer document hosted by a distributor is identified explicitly. A source listing or video index is not treated as a watched demonstration or an actual-unit check.

VR01 BISSELL Commercial BG10 model instructions

BISSELL Commercial. Step By Step Guide For Using The Upholstery Tool, steps 2-4; unpaginated maker HTML

Evidence limit: Basic model-page connections and recovery only; actual unit revision and full clear-water changeover/test not established.
