# Independent Barber Separate Decision Answer Key

Work, Money & Place | Local review edition v2 | November 21, 2026

Read only after saving an independent attempt of the fresh decision packet and its requested forms. This separate key supplies fictional teaching reasoning, not practical permission.

BB V2 independent chair-week decision

## BB V2 separate answer key

For the fresh chair week, owner value is 1,950 ÷ 60 × $25 = $812.50; job cash is $267 and allocations total $50. Each settled $68 payment costs $2.34. Supply use is $3 + $0.415 × completed services. After-reserve remainder is 65.245 × completions − $1,167.50 before final rounding.

At 17 completions: earned $1,156; fees $39.78; stock $10.055; management cost $1,179.335; before-reserve result −$23.34 and after-reserve −$58.34. At 18: earned $1,224; fees $42.12; stock $10.47; cost $1,182.09; before reserve $41.91 and after reserve $6.91. At 19: earned $1,292; fees $44.46; stock $10.885; cost $1,184.845; before reserve $107.16 and after reserve $72.16. These new scenarios are distinct from the original $65 week's −$12.97 / +$49.37 range.

The separate campaign yields cash acquisition cost $48 ÷ 3 = $16 and full owner-time acquisition cost ($48 + 96 ÷ 60 × $25) ÷ 3 = $29.33 per completed paid customer. The 11/5/3 cohort does not validate a 17-to-19-client week.

P-V2 requires review: initiation precedes the recorded request. No refund bank posting has occurred, so $25 stays held and unearned. The original $1.05 fee is already incurred; supported bank receipt less that fee is $23.95, which does not erase the $25 customer obligation. Correct only against authentic dated evidence and retain the erroneous entry in the audit history. A request or initiation never posts cash.

Paid-work readiness is HOLD despite the positive 18- or 19-service economics. The exact sanitation release and full service/reset rehearsal lack competent observed evidence. Complete that assessment within real permissions, resolve the prepayment record from actual evidence, and validate demand and affordable risk before a bounded paid trial. Do not solve the hold by shortening hygiene, inventing a signature or treating a spreadsheet as a credential.
