Independent Barber Business Complete Course

Work, Money & Place | Local review edition v2 | November 21, 2026

Begin with the five-step route and keep fictional examples separate from your own evidence.

For an already licensed, qualified California barber planning independent work in a licensed establishment. The worked service is a narrow adult dry uniform-guard maintenance cut. This course does not teach untrained people to cut hair or grant a license, practical qualification, chair permission or independent-worker status.

A chair business built on an existing skill

Start with one adult maintenance haircut you already perform competently and may legally provide. Verify the chair arrangement, rehearse the full sanitation and client cycle, then price the complete business week.

Do not shorten sanitation to fit the calendar. Use completed services and all committed owner time to decide whether the chair can support your plan.

Begin with L01. Check conditions and demand in L02 and L03 before buying or accepting paid work.

Five steps to a readiness decision

1. Choose a qualified service — L01 / F01. Verified narrow menu

2. Check the chair and local demand — L02, L03 / F02, F03. Reviewed relationship and buying decision

3. Rehearse the full permitted cycle — L04, L05, L06, L07 / F04, F05, F06, F07. Observed service and tool release evidence

4. Estimate before choosing price — L08, L09, L10 / F08, F09, F10. Independent cost and dated accepted plan

5. Complete reconcile and decide — L11, L12, L13, L14 / F11, F12, F13, F14. Actual records and readiness decision

Stop at missing conditions or evidence. The route is a study order, not permission to sell or perform unverified work.

Operate an appointment based adult maintenance haircut business from a permitted chair in an established California shop. The teaching service is a dry, uniform guard haircut on suitable short hair, with consultation, sanitation, result check, payment and follow-up. Existing barber training and supervised practical assessment are prerequisites.

Study the written lessons in order, then use the blank forms and your own-business planner inputs. Exercises include reasoned worked answers. A paper course is not a credential or practical qualification.

Fourteen lessons with 540 minutes of guided study. Local research, agreement review, practical education and observed rehearsal take additional time and have no guaranteed completion date.

How to begin

This course develops the business and control of an existing professional skill. Reading it does not grant a license, practical competence, a lease, insurance coverage or permission to serve clients. If you do

not already hold the required credential, begin with the California Board licensing route and recognized practical education before any service rehearsal on people.

Use the fictional River Bench Barber week to learn how bookings, tool release, full owner time, purchases and bank receipts differ. All people, businesses, permissions, observations and outcomes in that case are invented. They establish no real demand or readiness.

Work through the lessons with a blank form first. Filled examples are separate teaching answers. Browser notes, Word forms and the Excel planner are independent files and do not synchronize. Store fictional practice data here; protect actual customer records in your authorized business system.

First action: Write your current credential, one demonstrated service, and the exact establishment address and owner. Verify the individual and establishment licenses independently, then place unresolved items on hold before discussing a lease.

Estimate before actual accounting

Use the independent Estimate sheet before setting a price or receiving money. Every required driver must be known, including confirmed numeric zero. Its conservative arithmetic floor includes a fee-rounding allowance; it is not a market price or readiness proof. Keep the accepted plan in a dated Baseline, then record Quantity, Stock, Your order and one-order Cash actuals separately. Your order C39 links the independent estimate and never requires actual price, receipts or refunds. Marketing ratios require all three matching funnel counts. Earlier-order refunds need their own dated order record; never charge them to this order.

Stock scans all eight own-business slots, including opening units and rows after a gap. Confirm the number of filled rows in Stock C23. A mismatch or partial row withholds totals J34 and K34; zero is valid only when no rows are filled. Complete every required zero in a used row.

Your order C19 is only the actual fee withheld from service receipts. It cannot exceed those receipts. Record a genuine additional processor bank debit paid in C47 with its reason, date and statement reference in C48; confirm 0 when none. It is included once in management cost and linked Cash C49. Unknown or unreconciled fee data blocks a successful result.

L01 Choose a service you are qualified and permitted to deliver

Permission and local demand. Study and exercise allowance 35 minutes.

Produce: A verified permission record and a one-service boundary

Use forms F01.

Separate the four permissions

A haircut business needs a competent practitioner, the right individual credential, a permitted establishment and a real business arrangement. None substitutes for another. California requires the relevant individual license before fee-based barber services; the Board FAQ distinguishes that license from the establishment license. Verify the exact name, status, address and scope in the official records. A screenshot without a retrieval date is weak evidence because a license can change. Record what was checked and what remains unknown. [S01]

The worked example uses an already licensed California barber, Avery Reed, renting a station at the fictional River Bench shop in Sacramento. Those assumed facts are a teaching fixture, not real verification. California currently allows only the establishment owner to apply for the establishment license and issues one per address; a booth renter does not obtain a second establishment license

there. That differs from the Washington example in the source video. Do not transfer a rule across states. [S01]

Write a narrow menu

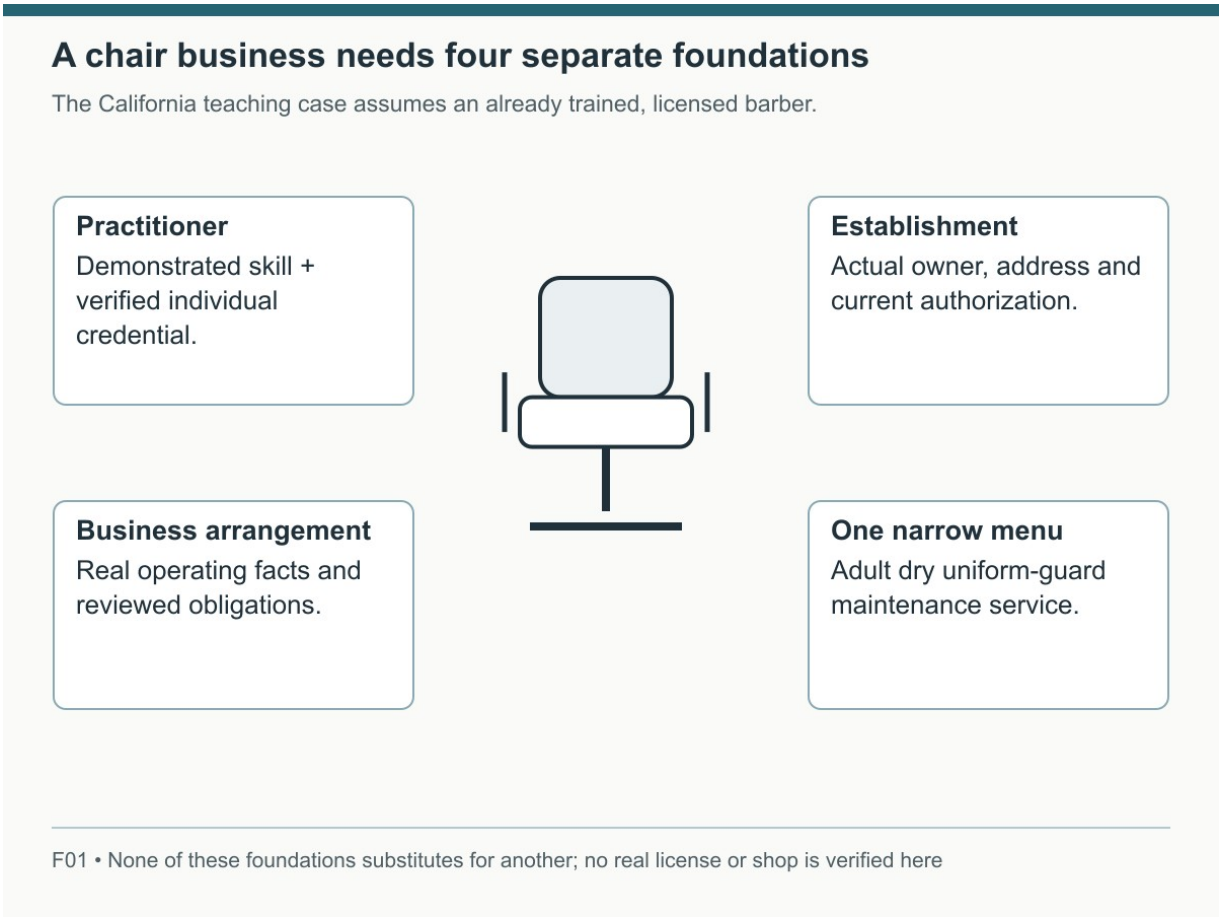
Our initial offer is an adult dry uniform guard maintenance haircut on suitable short hair, followed by a client review. It includes a consultation and the complete hygiene cycle. It excludes shaving, skin-close outlines, chemical services, dramatic changes and any request outside demonstrated ability. Guard length is a client choice confirmed on the actual tool, not a promise that every head will look identical. Existing professional judgment is needed for growth patterns, scalp protection and client comfort.

Write what you can observe: the client can describe the agreed length; the tool and guide are intact; skin is suitable for the work; the chair and water facilities are usable; clean tools have a complete release record. A vague statement such as experienced barber cannot answer a specific unfamiliar request. Refer that request or arrange further qualified education instead of improvising. [S02]

Build the permission record

For Sacramento, check the business operations tax account and zoning with the City. The City calls this a tax certificate rather than a general business license; it does not by itself permit work at a particular location. Confirm how the actual municipal registration meets any applicable business-license condition in a classification review. Verify a fictitious name filing if relevant and discuss your own services and premises arrangement with an insurance professional. Keep actual coverage and exclusions, not a verbal covered statement. [S03]

Your first output is a dated permission matrix. Use Verified, Unknown or Not applicable with reasons; leave no unknown disguised as a zero or a check mark. Reading this lesson cannot turn an unknown license, unsuitable room or unassessed skill into a verified condition. Paid booking stays closed until the applicable evidence is real.



An original chair illustration separates practitioner competence and credential, establishment authorization, the actual business arrangement and the selected narrow adult haircut menu.

Practice

A renter has a current barber license but the shop changed ownership yesterday. May the renter treat the former establishment license as sufficient?

Worked answer

No. The Board says an establishment license belongs to its recorded owner and location. Verify the new owner's actual establishment authorization and other conditions before appointments; a current practitioner credential does not resolve that gap. Record the hold and the evidence needed to reopen.

Sources: S01, S02, S03. Full links and limits are in the source register.

L02 Evaluate the chair lease and the actual working relationship

Permission and local demand. Study and exercise allowance 45 minutes.

Produce: A chair comparison with a classification hold or reasoned review

Use forms F02.

Read the operating facts

Ask who sets prices, schedules appointments, accepts or declines clients, collects customer money, owns the client book and chooses the service menu. Compare the written agreement with an ordinary

working day. A shop owner may require lawful sanitation and premises rules; that alone does not decide every employment question. Conversely, a contract titled independent contractor cannot neutralize owner control over rates, hours and how services are performed. [S04]

California's Labor Commissioner lists licensed barbers among professional-services relationships where additional requirements must be satisfied before Borello replaces the ABC test. Borello is itself a factual, multifactor employment test. Meeting an occupation exception is not a finding of independence. Federal tax classification separately evaluates behavioral control, financial control and the relationship; one contract does not settle both systems. [S04, S05]

Check the barber specific conditions

Use current Labor Code section 2778(b)(2)(L) and the broader professional-services conditions with a qualified reviewer. The barber-specific items include own rates and processing, direct client payment, own hours and choice of clients, own book and appointment scheduling, own business registration, and applicable reporting to the owner when renting space at the owner's location. The official statute page was blocked during preparation; the course relies on the current agency explanation and does not certify an individual arrangement. Obtain and review the full current text before committing. [S04, S06]

Ask the reviewer to examine all applicable conditions, not just those five practical clues. Document federal tax treatment, California wage and hour treatment, unemployment and workers compensation obligations separately. A Form 1099 is a reporting document, not a license to classify someone as independent. Stop the launch if the arrangement cannot be supported; an employment option may be the correct route. Do not ask the owner to write a different label around unchanged control.

Price the agreement and exit

Compare weekly rent, deposit, access, utilities, cleaning facilities, laundry, storage, signage, booking ownership, client contact permissions, insurance, closure days, maintenance and termination. Determine whether rent continues if the station or water supply is unusable. Ask who pays for damage and whether the lease can be ended without a long fixed commitment. Walk the customer route including stairs, restroom, waiting space and reasonable access needs before agreeing to the chair.

In the fictional comparison Chair A costs $220 weekly, offers six agreed access periods, secure storage and suitable water facilities; Avery independently sets appointments and rates. Chair B costs $170 but dictates hours and prices, pools customer payments and restricts the service menu. The lower rent is not a $50 saving that resolves classification. Hold B for proper review rather than selecting it in the spreadsheet. Obtain the complete final agreement before paying a deposit, and retain a dated copy of what was accepted.

Lower rent does not resolve actual control

Fictional chair comparison • relationship review comes before a commitment

Operating fact	Chair A • $220/week	Chair B • $170/week
Rates and appointments	Avery controls them	Shop dictates them
Customer payment	Direct client payment	Pooled by the shop
Menu and hours	Own supported choices	Shop controls them
Decision	Review full agreement	HOLD for proper review

F02 • Written labels and a $50 rent difference do not settle employment or tax classification

The fictional $220 and $170 chairs differ in who controls rates, scheduling, payments and menu. The cheaper option remains on hold for proper relationship review.

Practice

An owner says “You are independent because you pay rent,” but controls rates and all appointments. What is your next action?

Worked answer

Record the actual controls and suspend the rental launch while the relationship is reviewed under the applicable tests. Rent and a signature are insufficient. Do not manufacture independent facts in the agreement or assume a tax form settles employment law.

Sources: S04, S05, S06. Full links and limits are in the source register.

L03 Test local demand before accepting a fixed rent

Permission and local demand. Study and exercise allowance 35 minutes.

Produce: A two-week demand test with an explicit buying decision

Use forms F03.

Define who the offer fits

A demand test asks whether suitable adults near the licensed location will book your defined service at a price the full week can support. It does not ask whether haircuts exist. Select a practical travel area,

appointment windows and the exact menu. Record existing professional contacts only where you have permission to contact them; do not import another shop's client list or claim those relationships as your business asset. [S09]

Observe public menus and appointment availability at several local providers and note the date, actual service, location and booking conditions. Compare like services. A $20 clipper special without a consultation or a $90 specialty service is not automatically a comparable price. Do not enter dummy bookings or interfere with real appointment inventory. Ask prospective customers, with permission, what they currently do, what makes switching difficult, which times work and whether they would consider the stated service.

Use a small measurable experiment

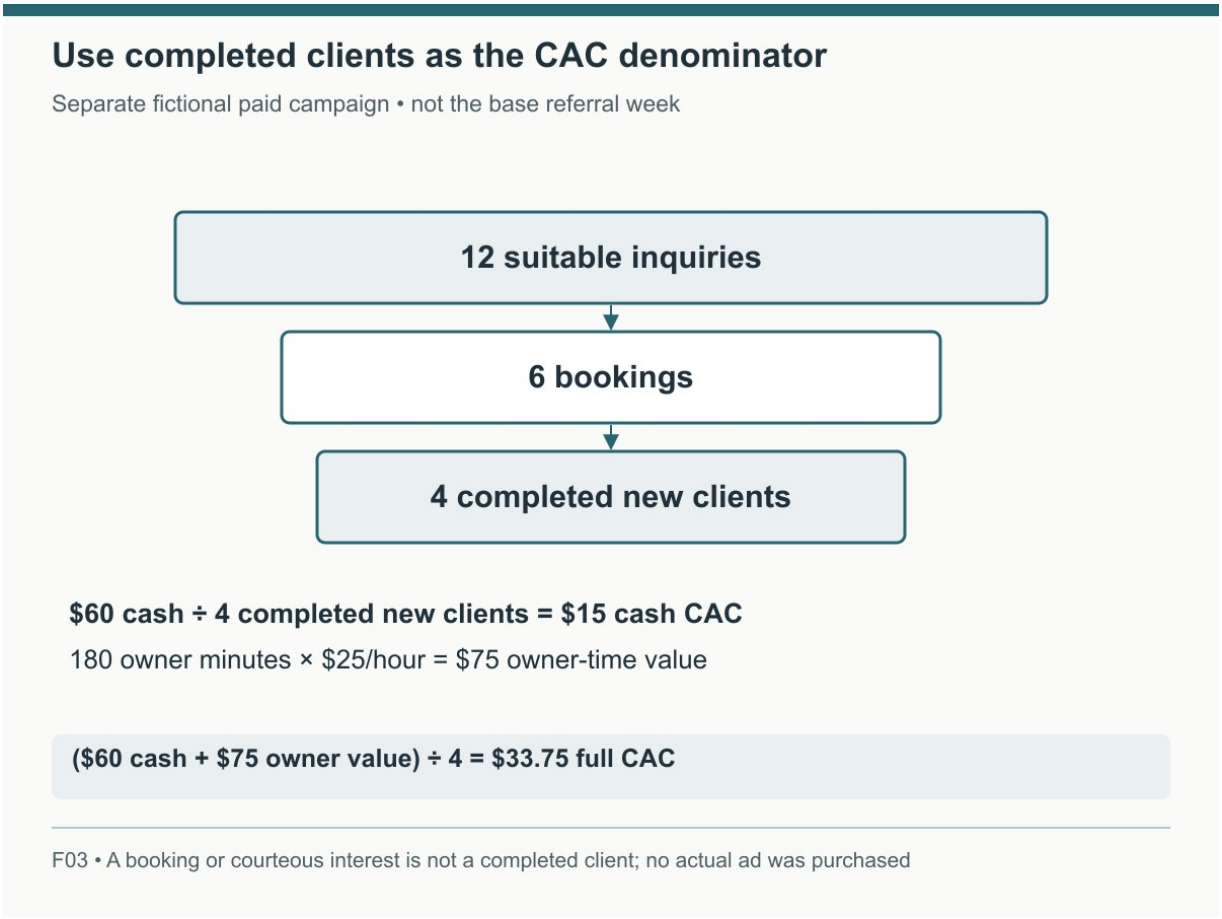
The fictional two-week research plan begins with desk research and a lease comparison on days 1–2; days 3–5 are six permission-based conversations with adults who fit the offer. On days 6–7 revise the description and price assumptions. In week two, if permission and a reviewed location already exist, offer a limited number of real future appointments through authorized channels; otherwise collect nonbinding interest only, without payments or fabricated availability. Review suitable inquiries, scheduled visits and completed visits separately.

A test threshold is a decision rule, not a forecast. Before buying, write your minimum acceptable result, maximum affordable loss and review date. Avery's fictional threshold is enough verified interest to support a staged four-week trial at a tolerable cash loss, plus an exit clause and ready sanitation capacity. If interest depends on a price below full cost or only on impossible evening access, decline the chair or revise the plan. Do not buy extra tools to compensate for an unproven offer.

Compare acquisition populations correctly

A separate hypothetical paid campaign spends $60 and 180 owner minutes valued at $25 an hour, producing 12 suitable inquiries, six bookings and four completed new clients. Cash acquisition cost is $15 per completed new client; full acquisition cost is ($60 + $75) / 4 = $33.75. Cost per inquiry is $5 cash; those denominators describe different results. Two bookings that do not complete must not count as acquired completed clients. No actual ad was purchased.

The worked weekly service case uses existing permission-based referrals and returning clients, not those four campaign clients. Do not silently charge campaign cost to the case or attribute the week's revenue to the test. Keep cohort, dates, cash and owner minutes together. Record research conversations that decline, and keep a useful objection such as the offered hours conflict with my work. Avoid turning courtesy enthusiasm into a paid booking.



Twelve suitable inquiries produce six bookings and four completed new clients in the fictional campaign. Cash CAC is $15 and full CAC is $33.75 per completed new client.

Practice

Your test has 12 inquiries, six bookings and four completed new clients. Why is $60/6 not the completed-client cash acquisition cost?

Worked answer

Six is the booking count, so $10 measures cash cost per booking. Only four completed, making completed-client cash CAC $15; adding 180 minutes at $25/h gives $33.75. Preserve the uncompleted bookings and compare the same campaign population.

L04 Prepare tools and a station that supports the menu

Prepare and rehearse the service. Study and exercise allowance 35 minutes.

Produce: A station map and exact tool compatibility record

Use forms F04.

Choose equipment after the service

The example uses a US Wahl Super Taper model 8400 and manufacturer-compatible guide 3354-1300 marked 1/8 inch. The manufacturer fact sheet identifies model 8400, its adjustable lever and compatible

premium guides. That fact sheet is a specification, not a complete operating procedure. Read the operating instructions supplied with the exact unit and verify voltage, cord, blade, guide attachment, cleaning and compatible disinfection before using it. Do not substitute a 230-volt European model because its name is similar. [S07]

You need an intact professional clipper, the selected compatible guide, clean combs, a cape with a sanitary neck barrier, mirror, sufficient prepared replacement tools, suitable cleaners and disinfectants, measuring tools, timer, covered clean storage, labeled soiled storage, closed soiled-textile storage and a covered hair-waste container. Include suitable lighting, a stable cleanable chair and accessible handwashing. Inventory what the shop actually provides before purchasing duplicates. [S02]

Make clean and soiled routes obvious

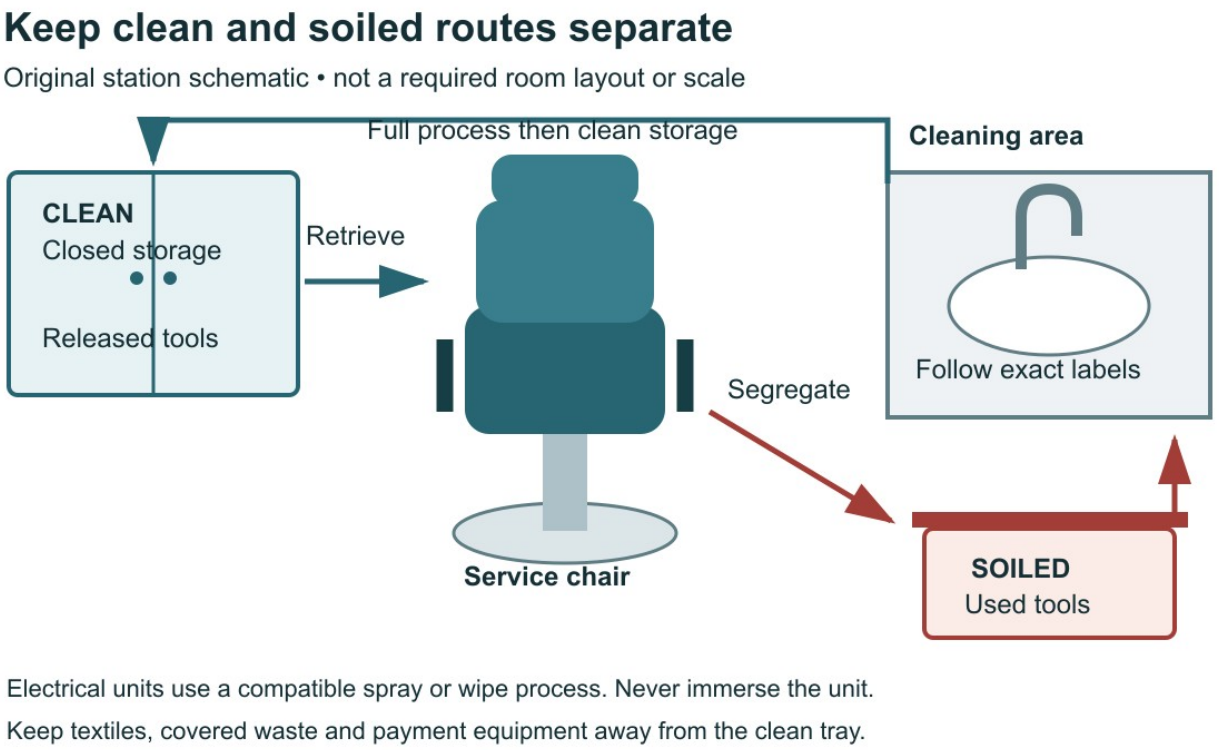
Place clean tools in closed labeled storage, away from loose used implements, dirty laundry, personal items and payment equipment. Route used non-electrical tools to a labeled soiled container and then the cleaning area. A clean tool that falls on the floor is soiled even if it was not used on hair. A drawer lined with absorbent foam cannot become the clean tool holder unless the holder can be disinfected as required. [S02]

Keep water and disinfectant handling away from live electrical equipment. Do not dip an electrical clipper in an immersion jar. Electrical tool treatment requires the current state method and a product and tool combination that both manufacturers support. A paper wipe over hair debris is not sufficient. If compatibility is unknown, do not release that tool for client use. Keep its status unavailable while you obtain the actual instructions or choose a supported alternative.

Inspect before every working period

Check casing, cord, plug, guide teeth and blade alignment condition against the exact instructions. Remove a damaged, pulling, overheating or unreliable tool from service. Do not teach yourself blade adjustment on a client or defeat a guard. Maintenance follows the manufacturer, with power disconnected when required. Oil is maintenance and does not replace disinfection. A generic motor-clipper manual is not proof that its blade-removal instructions fit model 8400. [S07]

Run a station rehearsal without a customer: retrieve clean supplies, prepare the chair, simulate use, segregate each item and time the release process. Walk the route with the shop owner to resolve storage, water and waste conflicts. Your output includes supplier prices as quotes or planning assumptions, product identities and unresolved issues. Purchase only the minimum supported kit after the demand and agreement decisions; decorative equipment is not a readiness criterion.



Original schematic, not a required floor plan or a scale drawing. Follow actual California tool handling, storage, facility and label requirements. See S02.

Practice

A guide tooth is cracked but the clipper runs normally. May a shorter appointment make it acceptable?

Worked answer

No. Remove the damaged guide from service and use an intact manufacturer-compatible replacement only after proper preparation. Calendar pressure does not change the tool condition, and an unsupported generic replacement is not automatically compatible.

Sources: S02, S07. Full links and limits are in the source register.

L05 Carry out the complete cleaning and disinfection cycle

Prepare and rehearse the service. Study and exercise allowance 50 minutes.

Produce: A witnessed sanitation rehearsal and a tool release record

Use forms F05.

Use the actual California sequence

For compatible non-electrical tools other than shears, current California section 979 requires debris removal, soap or detergent and water, complete drying with a new clean paper towel, and full immersion in an appropriate EPA-registered disinfectant used as directed. Remove tools with gloves or tongs and store them in labeled clean covered storage after the product’s required finishing steps. Keep solutions

covered and replace them when required by the manufacturer or when contaminated. Shears follow the separate spray or wipe sequence; electrical tools also require their own spray or wipe method. [S02]

For the selected US BARBICIDE concentrate EPA Reg. No. 954-11 label example, use 2 fluid ounces of concentrate added to 32 fluid ounces of water. Those are measured liquid volumes; 32 fluid ounces is the water volume, not the final mixture volume. Clean compatible hard nonporous tools first, fully immerse for 10 minutes, then rinse and dry before use. Prepare fresh solution daily or sooner when diluted or soiled. Follow the container’s current label, protective equipment, first aid, storage and disposal directions. The accepted label retrieved is dated 2015; current California registration was also checked. Recheck the exact container and current label before use. [S08, S15]

Keep methods and products distinct

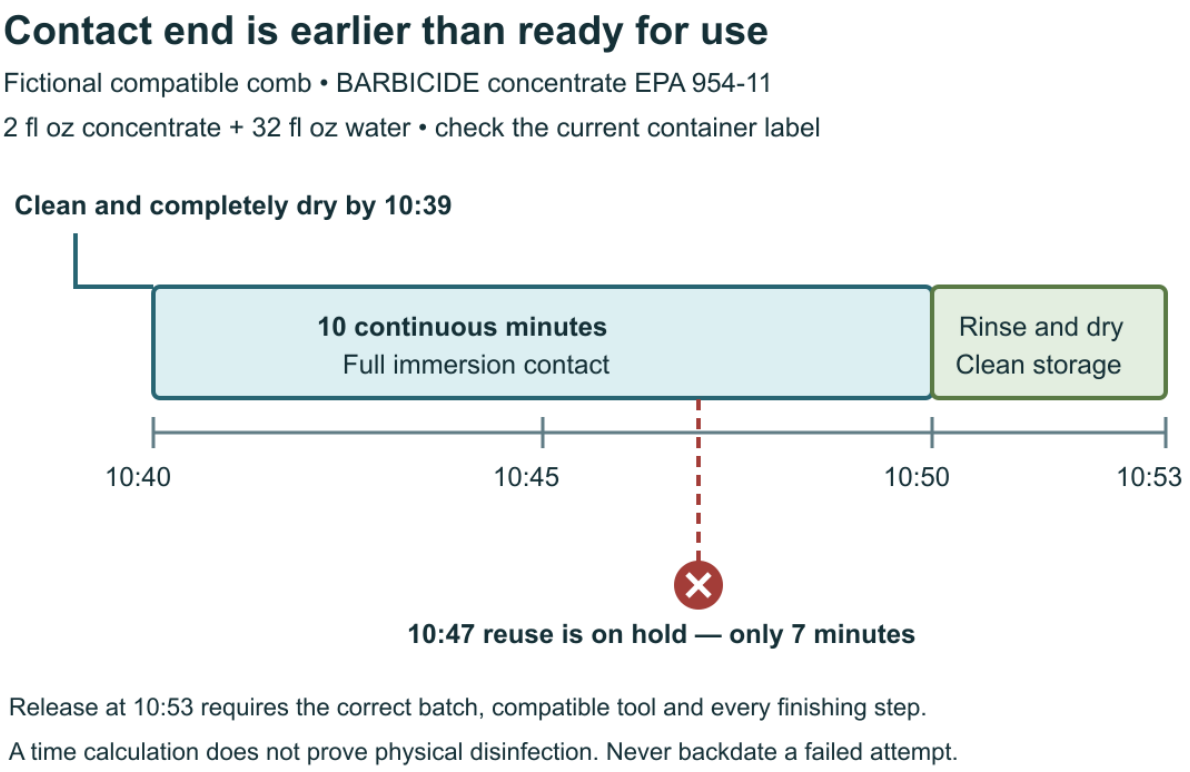
For compatible hard nonporous surfaces and appropriate spray treatment, the separate BARBICIDE RTU EPA 954-14 accepted label dated March 2025 specifies precleaning and a general 10-minute visibly wet disinfection period followed by air drying. It is ready to use: do not apply the concentrate dilution to it. Confirm the intended site, material, equipment compatibility and actual product label; pathogen-specific shorter claims are not the general service routine. Never spray an electrical unit in a way prohibited by its manufacturer. [S10]

Wear the label’s required protection while mixing or handling chemicals, measure accurately and keep products in correctly labeled containers. Do not mix disinfectants or add fresh liquid to disguise old dirty solution. If the surface dries early, the required continuous wet period has not been demonstrated; restore a compliant process according to the label and record the new time. A jar’s blue color and a disinfectant smell prove neither concentration nor contact time.

Record an observable release

Record date, product and registration number, batch preparation, tool IDs, cleaning completion, contact start, earliest release, actual release and initials. A fictional tool enters immersion at 10:40 and cannot be released before 10:50; rinsing, drying and clean storage still follow. A 10:47 appointment must use a separately prepared tool or wait. Schedule the actual entire reset, not just ten minutes. Our example reserves twenty minutes from client departure to ready station.

During a permitted observed rehearsal, intentionally present a tool with visible hair and an incomplete timer record. The trainee must reject both, complete the required sequence and demonstrate segregation. Stop after a spill, exposure, uncertain concentration, missing label or unavailable protective equipment. Follow the actual label and establishment response; do not improvise first aid or disposal. Physical compliance has not been tested by this written course.



Fictional compatible comb example under the selected US EPA 954-11 label and California section 979. Time alone does not prove disinfection. Exact container label governs. See S02 and S08.

Practice

A cleaned comb was immersed at 10:40, removed at 10:47, and looks clean. What record and action are appropriate?

Worked answer

Do not release it. Record the incomplete seven-minute attempt and complete a compliant full process under the current label, including required post-immersion rinsing and drying. Use a separately prepared comb or delay the client; never backdate the timer.

Sources: S02, S08, S10, S15. Full links and limits are in the source register.

L06 Consult obtain consent and define a result

Prepare and rehearse the service. Study and exercise allowance 35 minutes.

Produce: A concise consultation with a confirmed service decision

Use forms F06.

Turn a photograph into an agreement

Ask the client what they want to keep, what should change, how short they are comfortable going and what they disliked about the last cut. Ask about styling effort and whether a uniform short length is actually the desired result. Use a mirror and a reference photograph only to clarify shape and length. Do

not promise identical density, growth direction or scalp visibility. Before touching the hair, repeat the agreed service and the price and invite correction.

In the fictional appointment Avery asks Jordan Ellis: “You want the same short uniform length all over, with your natural hairline left alone. We will confirm the 1/8-inch guide on a small agreed area first. Is that what you want?” Jordan agrees. This is a documented consultation, not permission for a razor finish, beard line or a later shorter cut. Record the tool and actual guide label, lever position used in the qualified rehearsal, result preference and client response. Do not claim that the nominal guide dimension guarantees a measured finished hair length.

Screen without diagnosing

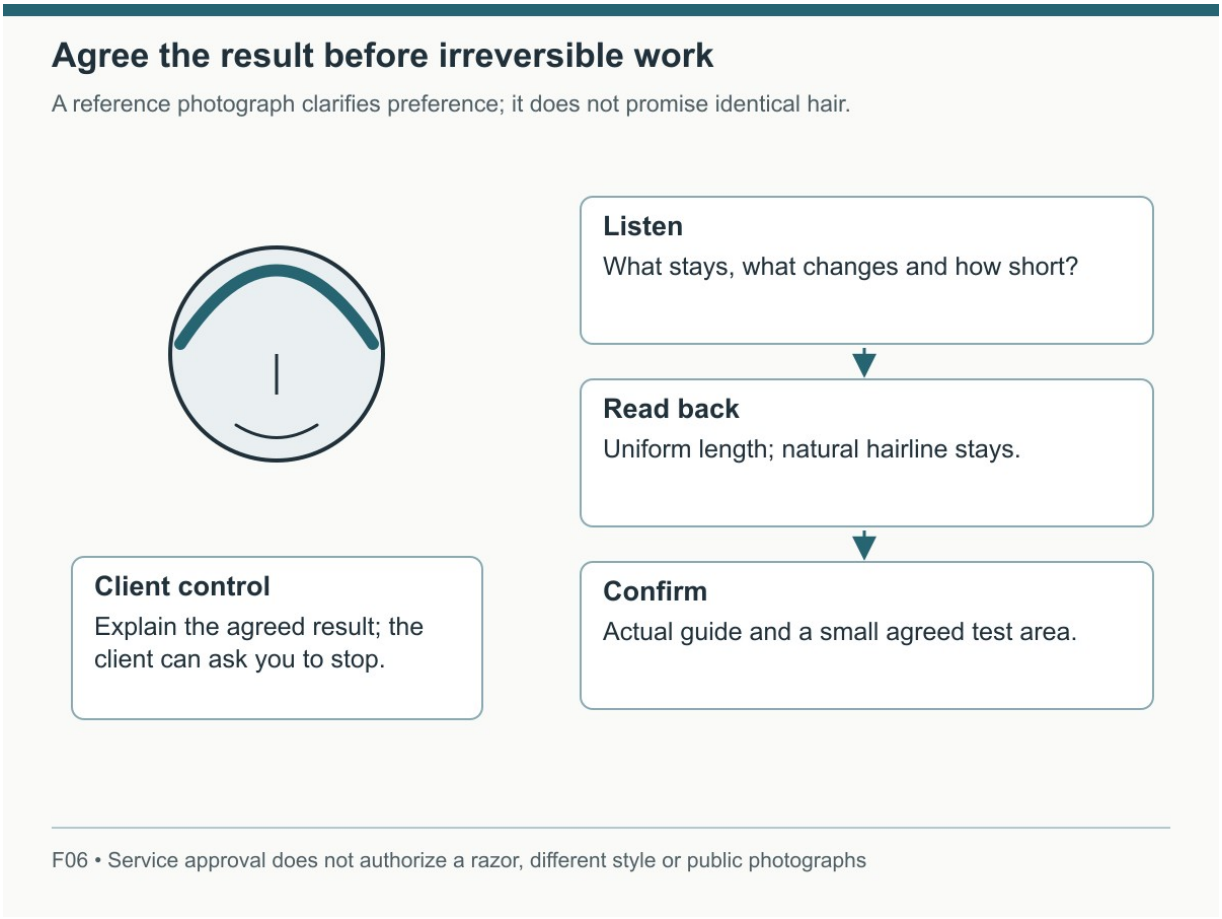
Look for conditions that make this service unsuitable, and ask relevant comfort questions in ordinary language. California’s disease and infestation rules govern when services cannot proceed. An unexplained lesion, visible infestation, injured skin or a client who cannot safely remain still is a stop or referral decision, not an opportunity to practice diagnosis. Explain that you cannot safely provide the booked service today. Record only necessary facts such as service deferred because the area was unsuitable, not an invented medical conclusion. [S02]

Consider communication and access before the appointment. Ask whether the client needs information in a different format or an adjustment to positioning within the facility’s capabilities. Obtain an explicit go-ahead and confirm the client can ask you to stop. This course begins with consenting adults; minors and services with additional consent requirements need a separately supported procedure. Do not treat a booking click as agreement to every possible service.

Keep records proportionate

Use a minimal preference record: appointment ID, date, agreed service, length description, client instructions, changes authorized and outcome. Keep contact details separate from public portfolio content. Permission to cut hair is separate from permission to photograph or post; declining a photograph must not reduce the quality of service. Use actual real work with specific permission in a portfolio, never a generated scene as a customer transformation. [S09]

Before draping, confirm hand hygiene, clean attire, a clean cape and a sanitary neck barrier so the cape does not directly contact the neck. Verify clean tools and a safe chair. Read back the scope and any known limitations. If the requested style needs a different trained technique, more time or unavailable equipment, offer another properly scoped appointment or refer it. Do not begin irreversible work while the client is still deciding.



A conceptual client portrait sits beside listening, read-back and exact-guide confirmation. The selected result is a uniform maintenance cut with the natural hairline left alone; additional services and photo use require their own decisions.

Practice

Jordan booked the maintenance cut but presents a photo of a skin fade and asks you to match it within the same slot. What happens before cutting?

Worked answer

Clarify the requested change, explain that the booked uniform guard service excludes a skin fade, and offer a separately supported service or referral. No price or status edit expands the fixed launch scope. The original service proceeds only if Jordan clearly accepts it; otherwise cancel or rebook under the agreed policy.

Sources: S02, S09. Full links and limits are in the source register.

L07 Rehearse and deliver the bounded maintenance haircut

Prepare and rehearse the service. Study and exercise allowance 50 minutes.

Produce: An observed complete service and a recorded practical gap

Use forms F07.

Practice only in the right setting

Begin the cutting sequence on a suitable training mannequin with the exact supported tool. A human rehearsal requires the applicable credential, setting, explicit informed permission, supervision where required and an observer competent to assess the service. The observer must see the whole cycle: consultation, preparation, cutting control, client checks, cleanup and records. A mannequin result alone does not establish safe client work; a fictional approval in this course is not a practical sign-off. [S01, S02]

The following is an original business-service workflow for an already trained barber. It does not replace hands-on barber instruction or the exact unit instructions. For model 8400, confirm the manufacturer-compatible guide marked 1/8 inch, its secure attachment and the lever position used in the qualified rehearsal. The manufacturer fact sheet supports the equipment identity and guide compatibility, not a universal haircut method. Stop if the actual instructions or condition cannot be established. [S07]

Work in controlled sections

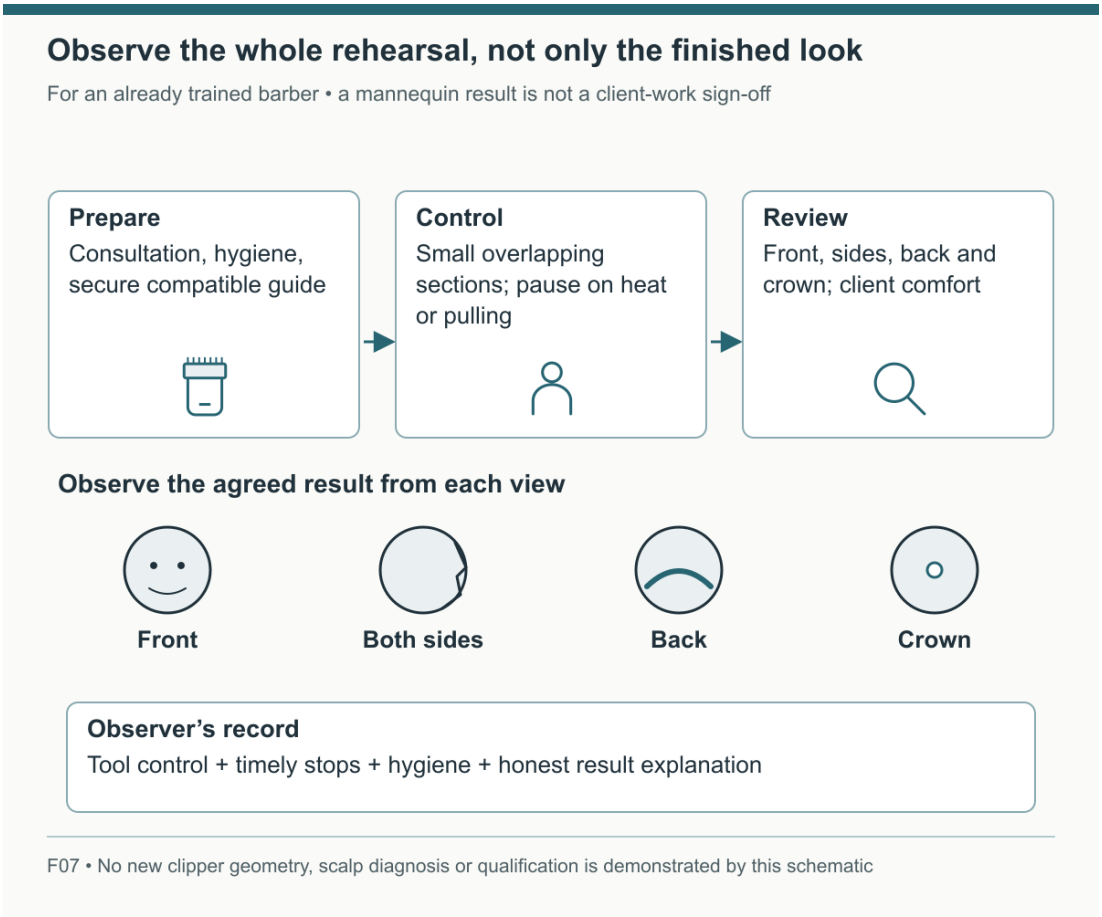
Prepare the station, sanitize hands, drape with the neck barrier and confirm the agreed uniform result. Comb suitable dry short hair in its natural direction and check for tangles or conditions missed during consultation. With permission, test a small agreed area that will remain within the final design. Show the result and confirm before extending the cut. Start with a longer supported option if uncertainty remains; a shorter length cannot be undone.

Using your demonstrated technique, work in small overlapping sections with the selected guide securely seated. Maintain light controlled contact, allow the tool to cut without forcing it, and pause to comb and inspect. Follow actual growth patterns, particularly at the crown; do not repeatedly scrape a difficult area or force the guide around an ear. Keep the client comfortably positioned and the cord clear. Monitor tool temperature and pulling. If the tool becomes hot, catches or loosens, stop and replace it with a prepared supported tool. Do not remove the guide to improvise a close outline.

Define acceptable evidence

Inspect the result in good light from the front, both sides, back and crown, comparing comparable areas and the agreed outline. Comb in more than one direction to reveal missed long hairs without converting the result into a different style. Use a hand mirror so the client can see the back. Ask about comfort and any uneven area they notice. Adjust a missed area only within the agreed service and your competence; obtain new agreement before a change in desired length.

The observer records uniformity appropriate to the agreed design and hair growth, no preventable skin injury, stable guide control, timely stops, correct hygiene and an honest result explanation. Photograph a mannequin or specifically authorized client only with separate permission. A successful rehearsal may identify a slower forty-minute cutting time; update the appointment design and costing rather than hiding it. The final practical readiness decision belongs to the actual qualified assessor and applicable authorities, not the business spreadsheet.



Preparation, controlled work and multiple-view review form one observed cycle. The diagram teaches what evidence to record without depicting an unverified cutting technique or granting qualification.

Practice

The crown appears longer after the first pass and the clipper begins pulling. Should you press harder and repeat the pass?

Worked answer

No. Stop the tool, protect the client and inspect condition according to the exact manufacturer instructions. Use a prepared supported replacement if available. Reassess growth direction and agreed design with professional judgment; never force or continue an uncomfortable tool to save time. Record the issue and the effect on schedule.

Sources: S01, S02, S07. Full links and limits are in the source register.

L08 Build an independent cost estimate before choosing price

Price and complete appointments. Study and exercise allowance 45 minutes.

Produce: An unpriced build followed by a dated accepted plan

Use forms F08.

Estimate the whole week first

A chair business has costs even when a client does not arrive. Build service volume, full appointment blocks, opening and closing work, travel, administration, client follow-up and possible idle commitments before selecting a menu price. Count sanitation as delivery time. Treat the owner's time as a planning value even when no salary leaves the bank. Include supplies consumed, chair rent, laundry, operating travel costs, equipment use and an appropriate share of overhead. Do not call unpaid owner time free.

The fictional planned week has twenty completed sixty-minute blocks, 180 minutes travel, 120 opening, 120 closing, 120 administration and sixty follow-up minutes: 1,800 minutes. At an assumed $25/hour, planned owner time is $750. Other independent preprice cost is $252 cash payments, $11.30 stock consumption, $15 nonfuel vehicle use, $10 equipment allocation and $25 overhead allocation. The total before payment processing is $1,063.30. All figures are teaching inputs, not supplier quotes or market rates.

Price after the build

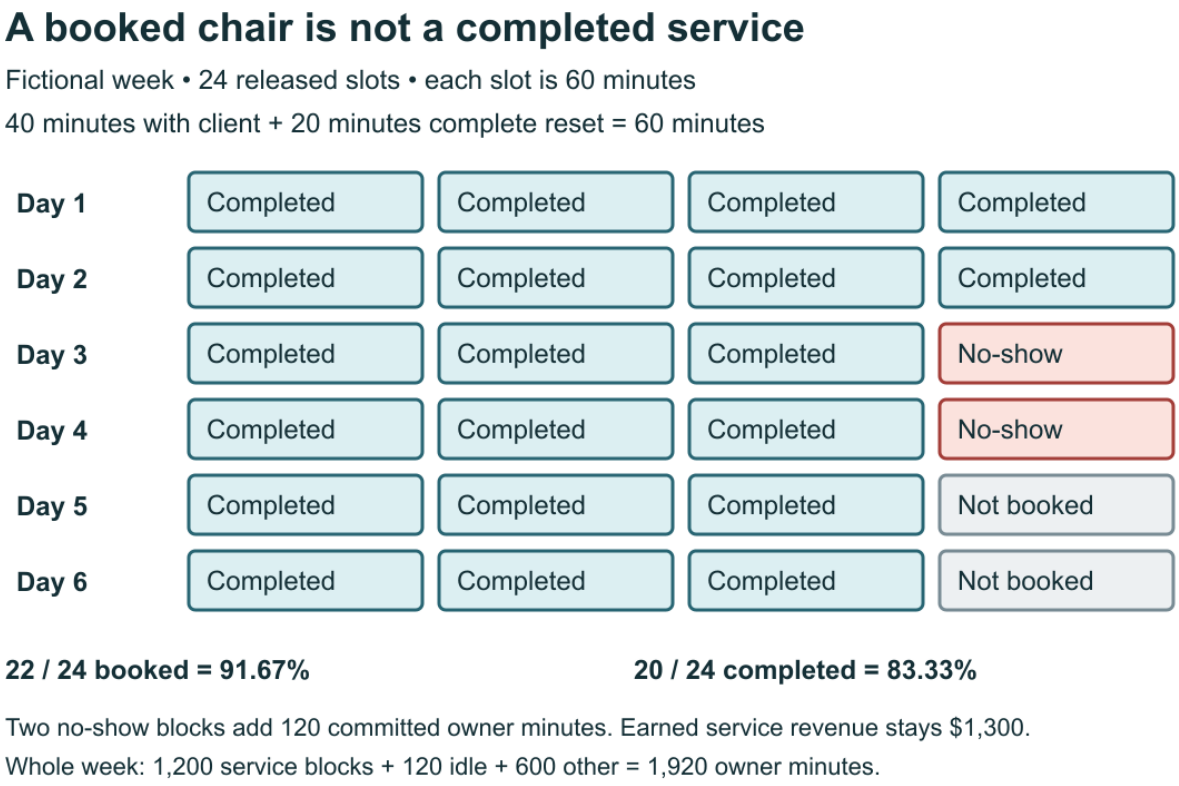
Assume twenty card receipts, a fictional 3% plus $0.30 per receipt, a $30 business reserve and a desired $100 management remainder after that reserve. Solve total weekly sales R from 0.97R − $6 − $1,063.30 − $30 = $100. Required R is $1,236.3917526, or $61.8195876 per completed service. Rounding up to a selected $65 produces a planned $1,300 of earned service sales and $45 of fees. Price must still fit actual demand, permitted scope and client value; arithmetic does not prove customers will buy.

The dated accepted plan is frozen on November 15, 2026: twenty services at $65, $1,300 planned revenue, 1,800 owner minutes and $1,108.30 planned management cost including processing. Planned result before reserve is $191.70 and after the separate $30 reserve is $161.70. Preserve those values and date as the original baseline. Replacing them with live formulas linked to actual time would erase the variance.

Count stock and purchases once

The example buys $57 of supplies in whole packages: neck strips, concentrate, RTU disinfectant, clipper oil and paper towels. It consumes $11.30 during the week and retains $45.70 at cost. Purchased stock is a bank payment; consumed stock is the week's economic cost. Do not subtract both the $57 purchase and the $11.30 consumption in management result. Keep any waste as lost units in the stock rollforward. Purchase prices include assumed nonrecoverable tax. [S11]

In California the example's haircut service has no sales tax, while supplies used in providing it normally bear sales or use tax. No retail sale is included. Tips are zero in this fixture and are not needed to make the price work; an actual tip needs its own record and tax treatment. Other income and business taxes remain outside the job result. Check the actual service and jurisdiction rather than assuming every state treats haircuts alike. [S11]



All counts, durations and outcomes are invented. Every completed block includes a forty-minute client cycle and twenty-minute reset. Lost bookings do not create earned service revenue.

Practice

Actual owner time rose by two hours. May you update the accepted baseline to 1,920 minutes and keep the variance at zero?

Worked answer

No. Retain the November 15 values-only plan of 1,800 minutes. Record actual 1,920 minutes and a 120-minute unfavorable variance worth $50 at the planning rate. The price remains the accepted price unless a separately authorized change applies.

Sources: S11. Full links and limits are in the source register.

L09 Write booking terms and a complete client confirmation

Price and complete appointments. Study and exercise allowance 35 minutes.

Produce: A reviewable confirmation that a customer can understand

Use forms F09.

State what the customer buys

A menu price and a social post do not fully explain an appointment. Send the provider’s real business identity and contact, exact location, service, included work, exclusions, duration, price, tax, total, payment timing and how a customer changes or cancels. Explain lateness and the opportunity to review

the result. State how concerns are handled without promising an unlimited free restyle. Provide the terms before the person commits, and retain what was accepted.

Fictional confirmation RB-020 to Jordan Ellis from Avery Reed, River Bench Barber, avery@riverbench.example.invalid: issued November 15, 2026, valid through November 16 for the November 17 10:00 a.m. appointment at the fictional Chair 2 inside River Bench Shop in Sacramento. Adult dry uniform guard maintenance haircut, consultation, result check and sanitary station cycle are included. No shampoo, skin fade, razor, beard, chemical or medical service. $65 service, $0 sales tax, $65 total, due after delivery; no deposit or mandatory tip. Planned chair block is sixty minutes, including twenty minutes after departure for reset.

Make changes and cancellations usable

The fictional policy allows cancellation or rescheduling without charge before work begins; no-show fees are zero for this first trial. A late client is contacted and may be offered a shorter scope only if it remains safe and explicitly agreed, or a later slot. The barber never removes required sanitation or converts the booked service into unsupported work. Any optional future deposit policy needs applicable-law review and clear disclosure before collection. A requested refund is not a bank debit.

Before changing the result or price, explain the revised scope, time and price and obtain agreement. Excluded launch work remains excluded even if someone selects Approved in a workbook field. Correcting your own incomplete agreed work is not automatically a paid change. The confirmation invites Jordan to raise a concern promptly, offers a reasonable review of the agreed result, and does not limit rights provided by law. It promises a reply within two working days, not an automatic free service regardless of circumstances.

Keep service and publicity permission separate

Record the fictional reply: “I agree to RB-020 as described for November 17 at 10:00 a.m.” dated November 15. This invented response shows the documentary pattern but creates no real consent. Photo use is declined and no image is published. Follow-up permission is one service check message; ongoing marketing consent is not implied. Keep a copy of the exact version, dates and replies without collecting a card number in free-text notes. [S09]

A complete neutral form includes empty provider and customer identities rather than prefilled River Bench data. The separate filled example shows a realistic whole agreement, including a fictional address description that cannot be mistaken for an active operating location. In your business replace every placeholder with verified facts before sending anything. The local course site does not email or create a booking; nothing in this lesson authorizes actual outreach.

The fictional appointment confirmation identifies the narrow $65 menu and full chair block. Photo permission is declined and a single service follow-up does not create ongoing marketing consent.

Practice

Jordan replies yes to the $65 haircut but leaves the optional photograph choice blank. May the business publish a before-and-after image?

Worked answer

No. Service approval does not establish publication permission, and blank is unknown rather than yes. Provide the service under the accepted terms and leave photography/publication off unless separately authorized.

L10 Schedule complete appointments and protect tool release

Price and complete appointments. Study and exercise allowance 35 minutes.

Produce: A realistic week with booked completed and lost slots separated

Use forms F10.

Model a usable chair block

Build the block from what a capable practitioner can actually do: five minutes consultation and draping, twenty-five minutes cutting, five minutes result check, five minutes payment and rebooking, then twenty

minutes tool and station reset. That is sixty minutes. The reset includes cleaning, required contact, finishing and storage; it is not a promise that every tool is ready exactly ten minutes after the client stands up. A slower actual process lengthens the block. [S02, S08, S10]

Avery releases twenty-four one-hour appointment slots across six access periods. Twenty-two are booked, twenty clients complete and two do not attend. Booking utilization is 22/24 = 91.67%; completed-slot utilization is 20/24 = 83.33%. Completion among bookings is 20/22 = 90.91%. These ratios measure different things; an almost full calendar can still lose revenue and use owner time. Four slots did not produce completed service: two never booked and two no-shows.

Count actual time without double counting

The twenty completed service blocks take 1,200 minutes including 400 minutes of reset. The two no-show blocks consume 120 committed minutes; Avery cannot sell them again in this fictional week. Add 180 travel, 120 opening, 120 closing, 120 administration and sixty follow-up minutes, producing 1,920 actual owner minutes. The two never-booked slots were not additional working commitments and are not counted twice. If the owner actually stayed for those too, those minutes would be added.

Use actual start, client departure, contact start, earliest tool release, station-ready time and next client start. A timer running while you perform another compatible reset task is one elapsed period, not two separate owner periods. Do not subtract the contact time because you were also entering a note; record mutually exclusive owner activities or a single block. A tool’s earliest release is still a real condition regardless of how owner minutes are allocated.

Respond to a delay

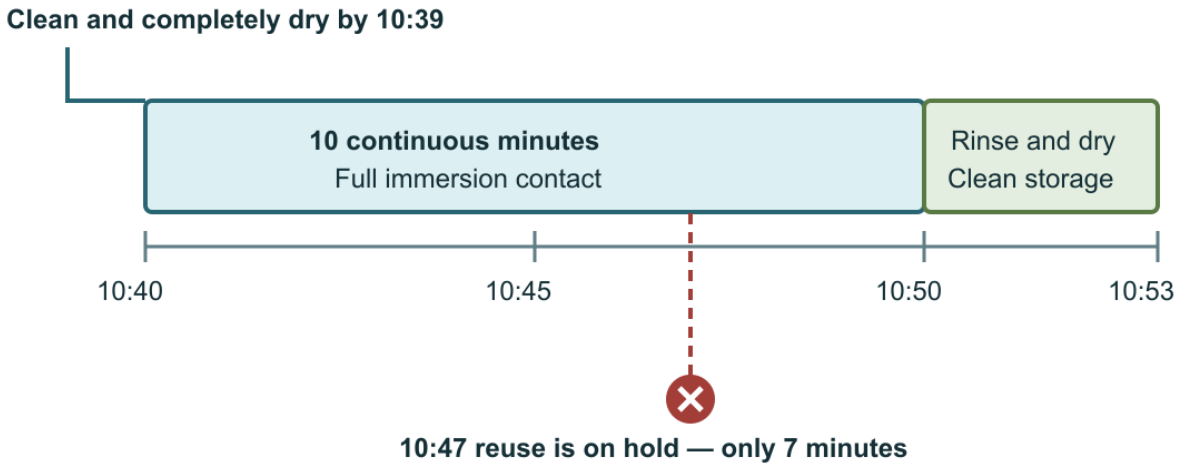
If a client is late, contact them using the permitted appointment channel and assess whether the full service can fit. Offer a later slot, an explicitly narrower supported service, or a cancellation under the terms. Tell the next client about a delay without sharing private details. Do not rush around the ears, skip a result check or label a wet tool ready. If the station loses water or required cleaning supplies, suspend appointments until conditions are restored.

Record lost slots, reason and whether any time was genuinely reusable. A no-show can lead to a better reminder or booking policy, but it does not automatically justify a fee that was never agreed. Use actual four-week patterns before increasing available slots or signing longer rental terms. Expansion needs enough clean tool sets, reset capacity and owner recovery time, not merely a higher utilization percentage.

Contact end is earlier than ready for use

Fictional compatible comb • BARBICIDE concentrate EPA 954-11

2 fl oz concentrate + 32 fl oz water • check the current container label



Release at 10:53 requires the correct batch, compatible tool and every finishing step.

A time calculation does not prove physical disinfection. Never backdate a failed attempt.

Fictional compatible comb example under the selected US EPA 954-11 label and California section 979. Time alone does not prove disinfection. Exact container label governs. See S02 and S08.

A booked chair is not a completed service

Fictional week • 24 released slots • each slot is 60 minutes

40 minutes with client + 20 minutes complete reset = 60 minutes

Day 1	Completed	Completed	Completed	Completed
Day 2	Completed	Completed	Completed	Completed
Day 3	Completed	Completed	Completed	No-show
Day 4	Completed	Completed	Completed	No-show
Day 5	Completed	Completed	Completed	Not booked
Day 6	Completed	Completed	Completed	Not booked

22 / 24 booked = 91.67% **20 / 24 completed = 83.33%**

Two no-show blocks add 120 committed owner minutes. Earned service revenue stays $1,300.

Whole week: 1,200 service blocks + 120 idle + 600 other = 1,920 owner minutes.

All counts, durations and outcomes are invented. Every completed block includes a forty-minute client cycle and twenty-minute reset. Lost bookings do not create earned service revenue.

Practice

A tool’s contact starts at 10:40, full ten-minute contact ends at 10:50, and rinsing, drying and storage take three more minutes. Which time governs reuse?

Worked answer

Reuse cannot occur before 10:53 in this fixture, after all required finishing steps and a satisfactory release check. A 10:50 contact end is not the same as a ready-to-use tool. The actual label, compatibility and clean storage conditions must also be met.

Sources: S02, S08, S10. Full links and limits are in the source register.

L11 Check the result resolve concerns and close the visit

Price and complete appointments. Study and exercise allowance 30 minutes.

Produce: A client handoff and a clear completion or hold decision

Use forms F11.

Check the agreed result before payment

Invite a calm review with front and hand mirrors and adequate light. Ask specifically about the agreed length and any uneven area, not merely all good while holding out the payment device. Compare the observed result with the consultation note. A client can accept the service and still decline a photograph or a rebooking. Record the service actually delivered, the client’s comments and any reasonable adjustment completed within scope.

Explain simple care within your competence and respect the client’s preference on a next appointment. Do not diagnose a scalp condition or make treatment claims. If an issue requires another practitioner or health advice, say why your booked service cannot resolve it. Keep the handoff practical: what was done, what was not done, how to contact the provider and what happens if a concern arises. A result check is not certification that the client has no skin or health issue.

Handle an adverse outcome honestly

Suppose the client identifies a missed patch that should have been included in the uniform haircut. If safe, within competence and with consent, correct it as part of the agreed service. Do not invoice a new $20 change merely because the original work was incomplete. If the client instead asks for a different shorter style after accepting the agreed result, assess scope and feasibility, then discuss any separately supported appointment before changing the hair.

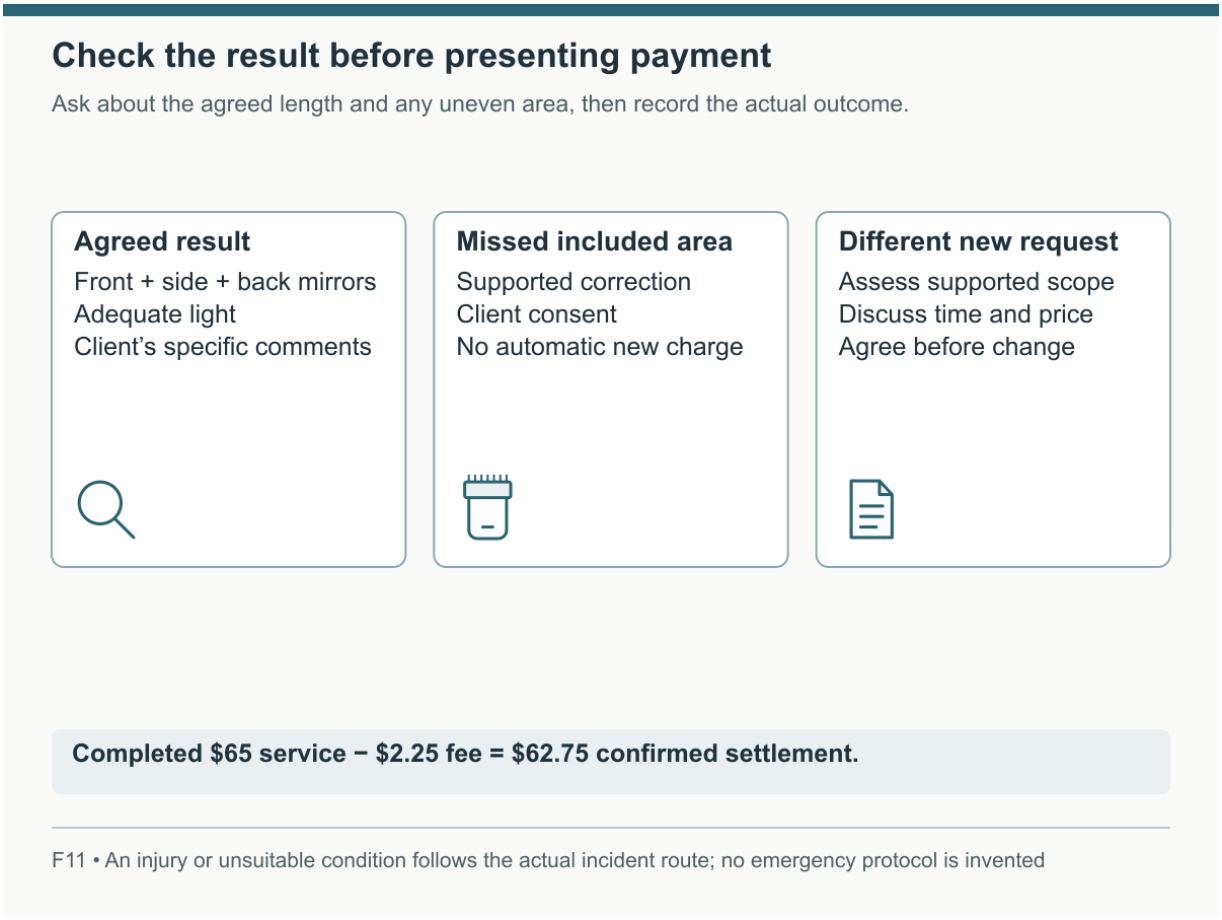
For a cut, exposure or other injury, stop the service and follow the establishment’s actual incident procedure and applicable requirements. Secure tools and materials involved, obtain appropriate assistance, document necessary facts and notify required parties. Do not continue to finish the look, promise a medical outcome or delete the record after a refund. This course does not establish an emergency protocol or verify physical response capability. [S02]

Issue a receipt tied to the service

The fictional RB-020 receipt records a completed $65 haircut, zero sales tax, zero tip, $65 card payment and the actual payment reference. A separate processor record shows $2.25 fee and $62.75 bank settlement. Service revenue is $65, not $62.75; the fee is a separate cost. If settlement has not arrived,

retain a processor receivable rather than claiming bank cash. Keep the receipt, completion note and settlement reference linked by appointment ID.

A short concern log records the date, issue, agreed scope, next action, owner and deadline. A requested refund is recorded as a request; an initiated processor action and a posted bank movement are separate later events. Follow up when promised and close only with the relevant evidence. The customer’s statement that a refund was requested does not prove the business’s bank account was debited. Genuine uncertainty remains a hold, not an invented zero or a completed resolution.



A calm result review separates a missed included area from a different requested service. The fictional $65 completed appointment incurs a $2.25 fee and settles at $62.75.

Practice

A $65 card service settles as $62.75. What amounts are revenue fee and bank cash, assuming the service is completed?

Worked answer

Earned service revenue is $65, processing expense is $2.25, and confirmed bank receipt is $62.75. A receipt alone is not settlement evidence. A later refund needs its own authorization and posted evidence; it is not inferred from a complaint.

Sources: S02, S09, S11. Full links and limits are in the source register.

L12 Reconcile the week and separate money from result

Records customers and readiness. Study and exercise allowance 45 minutes.

Produce: A weekly close with inventory cash liabilities and plan variance

Use forms F12.

Reconstruct every completed service

Link the twenty completion records to twenty $65 receipts and twenty $2.25 processor fees. Gross completed sales are $1,300 and fees are $45. No tips, retail sales, customer sales tax, prepayments, refunds or owner draws occur in the base week; each is a confirmed zero supported by the fictional event packet. Real blanks stay unknown. Maintain unique event IDs and source references. A shared settlement document may support multiple different receipts; a duplicate transaction cannot be counted twice. [S12]

Opening bank cash is $1,000. All twenty payments settle in the week, adding $1,300 less $45 fees. Paid chair rent $220, laundry $20 and fuel $12 reduce cash by $252. Stock purchases reduce cash by $57. Closing bank is $1,946. Equipment purchase, tax remittance and owner draw are zero. The $30 reserve is a designation inside that bank balance, not an additional bank payment. Customer liabilities are zero in the base case.

Read the management result

Actual owner time is 1,920 minutes or 32 hours; at the planning value $25/hour that is $800. Subtract cash job cost $252, consumed stock $11.30, nonfuel vehicle allocation $15, equipment allocation $10, overhead allocation $25 and fees $45 from earned $1,300. Management result before reserve is $141.70; after designating the separate $30 reserve the remainder is $111.70. Neither is accounting net income or take-home pay, and other actual taxes and business costs may remain.

Reconcile supply units. Neck strips: 100 purchased, 20 used, 80 left, $0.80 used. Concentrate: 64 fl oz purchased, 12 used in six fresh batches, 52 left, $3 used. RTU: 64 fl oz purchased, 12 used, 52 left, $4.50 used. Oil: 4 fl oz purchased, 0.5 used, 3.5 left, $1 used. Paper towels: 100 purchased, 40 used, 60 left, $2 used. Lost units are confirmed zero. Ending stock cost is $45.70. Fluid ounces describe inventory volumes, not a universal dose per client.

Preserve liabilities and adverse variants

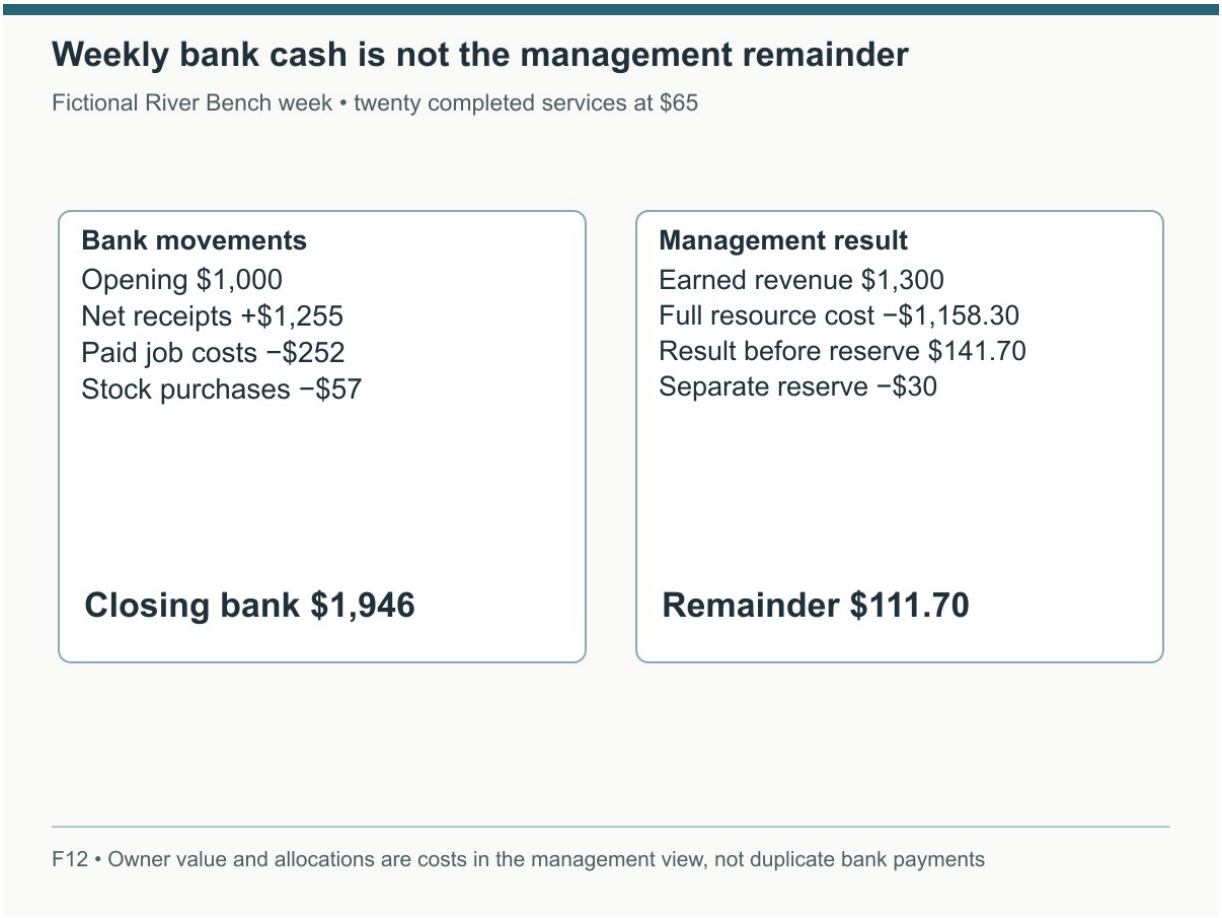
A separate optional practice variant takes a $25 prepayment on November 16 for a November 23 appointment. No service occurs in the measured week. A refund request on November 18 and initiation on November 19 do not reduce that $25 liability or bank cash; a valid $25 posting on November 20 does. Fees retained by the processor remain a separate actual cost. Do not use a positive job-completion status or an earlier request date to manufacture revenue.

Compare actual with the accepted November 15 plan: revenue is unchanged at $1,300, actual time is 120 minutes higher, management cost is $50 higher at $1,158.30, and before-reserve result is $50 lower. Document the two no-shows and the scheduling decision they suggest. This arithmetic establishes the fictional example only. It does not prove real bank reconciliation, deductibility, employer status or tax compliance. Reconcile your own business with supporting records and appropriate professional help.

Reject an inconsistent refund chronology

Record the real request before its actual initiation. In the unused-prepayment worksheet, an initiation dated before the recorded request, an initiation without a known request, a bank-posting date with zero amount, a missing posted amount or duplicated source must remain under review. A warning is not the only control: the formulas withhold a reconciled bank close and retain the confirmed customer funds until supported completion or a supported refund debit releases them.

For a confirmed $25 unused prepayment with no supported bank refund, $25 remains held even though the original $1.05 fee left only $23.95 net receipt cash. Requested and initiated are separate from bank-posted. A valid $10 partial debit leaves $15 held; only the supported full $25 debit clears this fixture. Unknown dates or amounts are not confirmed zero. Correct evidence from authentic records, preserve the incorrect entry in its audit trail, and repeat the close before continuing.



The fictional cash roll-forward ends at $1,946 while the complete-cost management result is $141.70 before a separate $30 reserve, leaving $111.70. These measures reconcile to different movements.

Practice

The base bank balance is $1,946 while the after-reserve management remainder is $111.70. Is the difference an error?

Worked answer

No. Bank includes opening cash, full stock purchases and actual paid amounts; management result includes owner time and allocations, only stock consumed, and a separate reserve designation. Reconcile each measure to its own movements instead of forcing bank cash to equal profit.

Sources: S11, S12. Full links and limits are in the source register.

L13 Attract suitable clients and earn voluntary repeat visits

Records customers and readiness. Study and exercise allowance 35 minutes.

Produce: An honest offer and an unsent two-week outreach sequence

Use forms F13.

Publish a useful service description

Draft this only after the offer and location are verified: “River Bench Barber — Avery Reed. Adult short maintenance haircuts by appointment at the confirmed shop location in Sacramento. Our initial dry uniform guard service includes consultation and a result check, $65, no required tip. Plan a sixty-minute chair block; shaving, chemical work and skin fades are outside this menu. Contact avery@riverbench.example.invalid to discuss suitability and available times.” This is an invented unsent teaching profile; the address is deliberately nonoperating. Replace it with true credentials, location and booking details in a real launch.

Use your own authorized listing and approved shop signage, permission-based referrals and community spaces that permit local offers. Obtain the owner’s agreement about using the address, name and photographs. Do not claim you own the shop or borrow another barber’s reviews. A generated illustration may explain the course, but cannot demonstrate your actual haircut results. Display only truthful work samples with specific client permission. [S09, S13]

Use respectful messages

Unsent first inquiry: “Hi Taylor, you said you were open to hearing about my new haircut appointments. I am considering an adult short maintenance service near your area at the stated $65 price. Would the location and these appointment windows fit your routine? There is no need to book, and I am gathering feedback before committing to rent.” Do not message a stranger as though they previously agreed, and do not send a real appointment offer before the permission gates are satisfied.

Unsent follow-up after a permitted conversation: “Thanks for your feedback. You mentioned Saturday mornings. I can confirm availability only after the location and launch checks are complete. May I send one update then? If you prefer no messages, I will leave it here.” After an actual completed appointment, a service check can ask whether an agreed concern was resolved; ongoing promotions need their own lawful permission. Keep unsubscribe or stop requests effective in every list, not merely in one device.

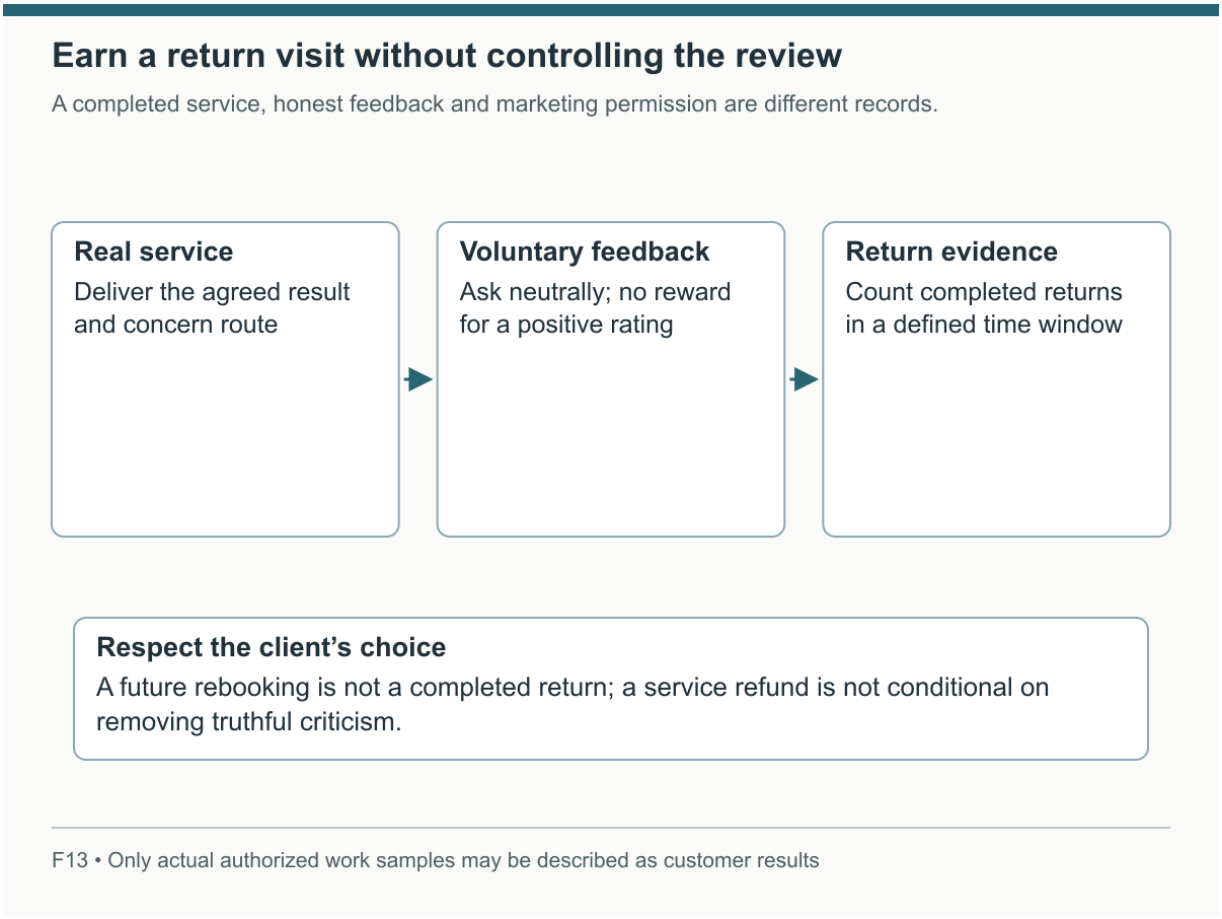
Measure completed and returning customers

Week one of the outreach plan contains six permitted conversations, review of three comparable menus and two chair comparisons. Week two contains the revised profile, approved signage draft, one

authorized community offer where allowed and a follow-up only to people who requested it. Track channel, inquiry, suitability, booking, attendance, price paid and permission. No messages, listings or ads are sent by this course. [S09]

Ask for a voluntary honest review after real service, without an incentive or pressure for a positive rating. A customer can decline and still receive normal service. Do not write a review for them or offer a refund only if criticism is removed. The FTC rule addresses fake reviews and incentives conditioned on sentiment; the course's no-incentive policy is an operating choice rather than a claim that all incentives are illegal. [S13]

Track the percentage of customers who actually return within your chosen observation window, with eligible clients and dates defined. A future rebooking is not a completed return visit. Reconcile the same acquisition cohort using L03's $15 cash CAC and $33.75 full CAC example, and compare it with contribution and retention actually observed. Do not assume a lifetime customer value to justify a large purchase when you have no repeat-visit evidence.



The service concern route, voluntary honest feedback and completed repeat visits remain distinct. No incentive, pressured review removal or assumed lifetime customer value is used.

Practice

A business offers a refund only if a client deletes a truthful bad review. What should the business separate?

Worked answer

Handle the service concern and any appropriate refund on its merits and applicable obligations. Do not condition it on removing truthful criticism. Invite voluntary honest feedback without controlling the rating, and preserve the service/refund record independently.

Sources: S09, S13. Full links and limits are in the source register.

L14 Use evidence to decide whether to open continue or stop

Records customers and readiness. Study and exercise allowance 30 minutes.

Produce: A practical readiness review and a four-week decision

Use forms F14.

Review the whole chain

Assemble the permission record, reviewed chair agreement and classification analysis, demand evidence, supported equipment and labels, observed practice record, unpriced estimate, dated price plan, client terms, completed service record and reconciled weekly close. Ask a qualified observer to trace one appointment through the chain. A pile of checked boxes cannot overcome a missing establishment authorization, unsuitable station or unsupported tool combination.

Readiness is service-specific. The observer must see accurate consultation, safe tool control, no shortcuts in hygiene, complete wet contact and finishing, sensible stops and a useful client handoff. Use measurable observations and defects: guard stayed secured, no pulling reported, tool release completed after the timer and finishing, client saw the agreed result. Do not award readiness because a fictional customer approved an estimate or the Excel sheet shows a positive number. [S01, S02]

Apply a small launch limit

Open only the service and number of appointments the actual evidence supports. A limited four-week trial may cap booked slots, cash exposure and lease duration while allowing full reset time. Record the date and owner of the next review. Reassess if the location, product label, tool, legal conditions or service menu changes. Expansion to shaving, chemical services, employees or a new shop is a new decision with separate training, authority, equipment and risk review.

The fictional week’s $111.70 after-reserve remainder is small relative to the $800 owner-time value and the $1,946 bank balance. It supports a decision discussion rather than a success claim. Reducing owner time through a better booking process can help; shortening required disinfection cannot. Higher prices might reduce demand, and more bookings might require more tool sets or a different lease. Test a change with explicit assumptions and compare actual outcomes without rewriting the accepted baseline.

Practice a lower demand decision

Adverse variant: only fifteen services complete at $65 while the same 1,920 owner minutes and $252 cash costs remain committed. Fees become $33.75, modeled supply consumption $9.225, including the same six fresh concentrate batches, nonfuel vehicle $15, equipment $10 and overhead $25 remain. Before-reserve management result is $975 − $800 − $252 − $9.225 − $15 − $10 − $25 − $33.75 = −

$169.975, rounded to −$169.98. After the $30 reserve designation, remainder is −$199.98. Keep the successful base intact and record this as a separate sensitivity, not actual history.

The fifteen-client variant keeps 12 fluid ounces of concentrate consumed across six open days, costing $3. Neck strips cost $0.60, RTU $3.375, oil $0.75 and paper towels $1.50, totaling $9.225 before final rounding. Actual usage can differ, so reconstruct daily batches, doses and losses from records rather than scaling every supply by completed appointments. This is why a broad volume formula cannot replace a usage log.

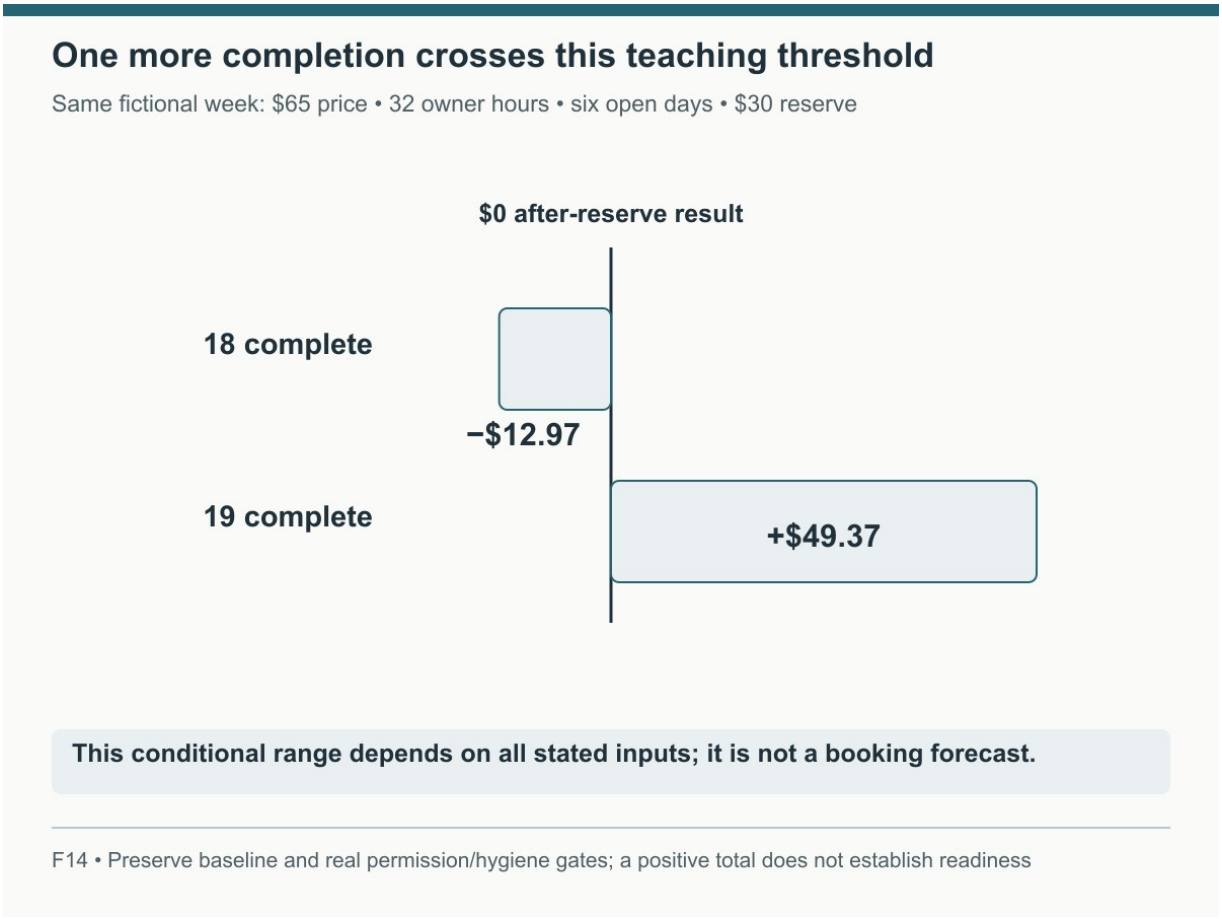
If the trial fails the preset loss or demand threshold, do not extend the lease automatically. Review hours, offer, acquisition cost and actual client feedback; pause, choose an employment route or close the trial responsibly if needed. Resolve prepaid obligations, return permitted property, communicate through authorized channels and protect client records. Finish with a real next decision supported by evidence, including a legitimate stop decision.

Locate this week s narrow volume threshold

Keep the original teaching week’s $65 service price, six open days, 1,920 owner minutes valued at $25 an hour, $252 paid job costs, $15 nonfuel vehicle allocation, $10 equipment allocation, $25 overhead and $30 reserve unchanged. Each settled $65 receipt costs $2.25 under the assumed 3% plus $0.30 fee. Six concentrate batches still cost $3; the remaining modeled supplies cost $0.415 per completed haircut. A reduced completion count does not erase the committed week or shorten required hygiene.

At 18 completed haircuts, earned revenue is $1,170, fees are $40.50, supply use is $10.47 and total management cost is $1,152.97. The $17.03 result before reserve becomes −$12.97 after the $30 reserve designation. At 19, revenue is $1,235, fees are $42.75 and supply use is $10.885; full-precision management cost is $1,155.635. The result rounds to $79.37 before reserve and $49.37 after reserve. The change from 18 to 19 crosses this particular teaching week’s after-reserve threshold.

This is a conditional 18-to-19 completion range for these exact inputs, not a promise that 19 clients will book, a universal price, or a rule for every shop. A different chair bill, working week, price, total owner time, supply log or reserve changes the threshold. Use Chair schedule’s separate sensitivity section and record the assumptions; keep the accepted baseline and actual week intact.



At the unchanged fictional week inputs, eighteen completed services leave a $12.97 after-reserve loss, while nineteen leave $49.37. The comparison is conditional and does not predict demand or authorize practice.

Practice

Complete the new BB-V2 decision packet using F03, F05, F08, F12 and F14. Save the unsolved packet and your forms before opening the separate answer key. Decide whether the supplied evidence permits a paid trial, even if the economics are positive.

Use the fresh decision packet and linked forms. Its solution is in the separate Answer Key DOCX/PDF; save your attempt first.

Sources: S01, S02, S04. Full links and limits are in the source register.

Fresh independent decision packet

BB V2 independent chair-week decision

Work from these new fictional records, not the completed base week. Fill F03, F05, F08, F12 and F14. Show unrounded supply arithmetic and round only the final dollar results to cents. Save your first attempt and questions. The answer key is on a separate page and in a separate download.

Packet BB-V2 concerns an already licensed, trained barber with verified establishment permission for the same supported dry maintenance cut. Current independent-relationship review and permitted chair access are recorded. A competent observer has not yet signed the exact selected tool's actual release process or the complete haircut/reset rehearsal. No record supplies that missing observation.

The proposed week has six open days and 24 released 60-minute slots. Compare 17, 18 and 19 completed services at $68 each. Hold complete owner time at 1,950 minutes valued at $25 an hour; unused time remains committed. Do not shorten reset or disinfection.

Cash job costs are chair rent $235, laundry $20 and fuel $12. Nonfuel vehicle allocation is $15, equipment allocation $10, overhead $25 and reserve designation $35. No tips, retail tax, deposits, refunds, owner draws or equipment purchases occur in this proposed week.

Use one settled customer payment per completed service. The fictional processor takes 3% of each $68 receipt plus $0.30, rounded to cents for each receipt. Six fresh concentrate batches together cost $3. Other actual modeled supply use is $0.415 per completed service; purchasing cash is not charged again as consumption.

The measured inquiry cohort has 11 qualified inquiries, 5 bookings and 3 completed paid customers from $48 campaign cash and 96 owner minutes at $25 an hour. This is a separate campaign population; do not add its costs to the chair-week scenario without an explicit bridge. It does not establish demand for the 17/18/19 completion cases.

Separate unused-prepayment record P-V2: $25 received and bank-posted on November 16, 2026; actual original fee $1.05. Refund requested November 19; initiation was entered as November 18; no bank debit is shown. Posted-refund amount is confirmed 0 and its date/source/event ID are empty. Determine whether the entry can close, what funds remain held and what evidence is needed. Do not backdate a request to conceal the defect.

Complete forms F03, F05, F08, F12, F14. Save your first attempt before opening the separate Answer Key file. No answer to this packet is printed in this course or workbook.

Your decision and evidence _____

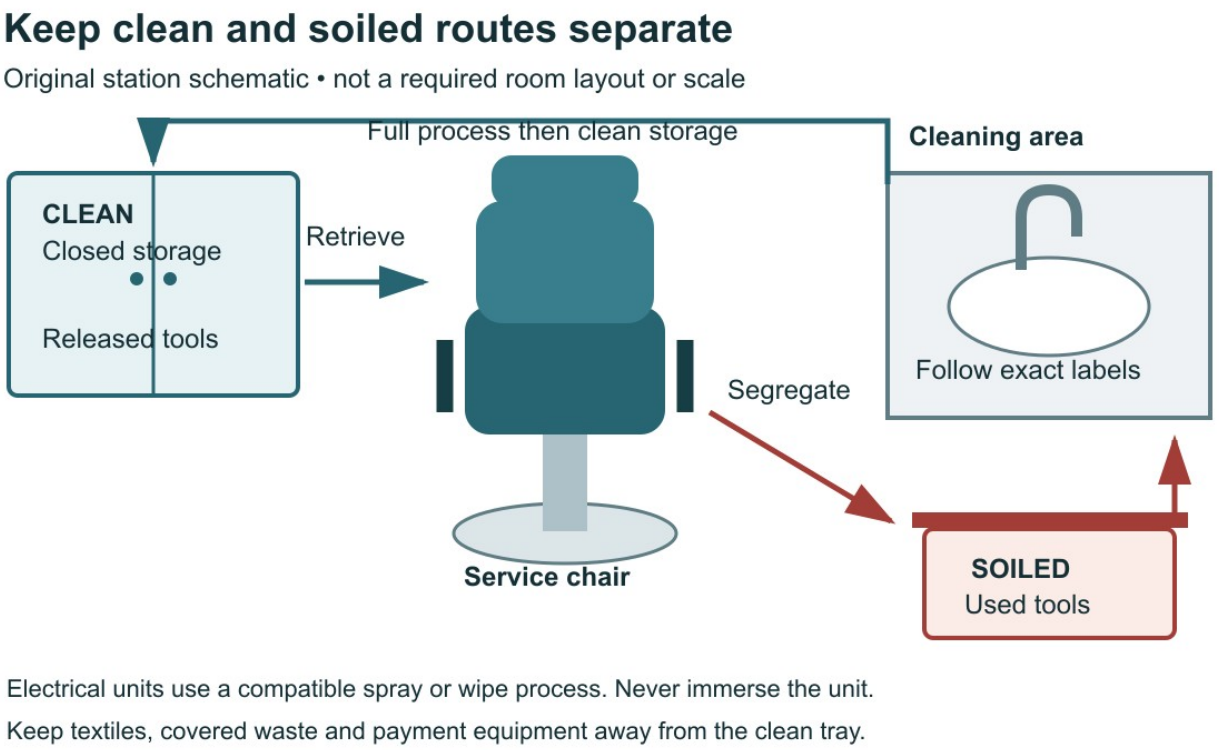
_____

One complete readiness decision

- Actual current individual credential, establishment authorization, municipal requirements, insurance and relationship review documented for the exact location.
- One narrow service within demonstrated competence; unsupported and excluded work remains excluded.
- Actual tool instructions, intact compatible guide and current product/container labels checked; no immersion of electrical tools.
- Competent observer sees permitted full consultation, controlled haircut, result review and complete sanitation/tool release without shortcuts.
- Suitable demand evidence and affordable trial/exit decision recorded before fixed commitments.
- Unpriced cost estimate, chosen customer price and dated frozen accepted baseline kept separately.
- Actual receipts, settlement, whole owner time, stock, customer obligations and bank movements reconcile; unknown blanks remain unknown.
- Real record privacy, client concern response and closure responsibilities can be performed; course completion alone is not practical authorization.

Original visual reference

Clean and soiled station routes



Original schematic, not a required floor plan or a scale drawing. Follow actual California tool handling, storage, facility and label requirements. See S02.

Contact period and actual ready time

S09 Protecting Personal Information A Guide for Business

Federal Trade Commission. Checked 2026-11-21. Limit collected data, protect access and plan retention/disposal and incident response.

General operational guidance; no specific privacy-law compliance certification.

https://www.ftc.gov/business-guidance/resources/protecting-personal-information-guide-business

S10 BARBICIDE RTU EPA 954 14 accepted label March 6 2025

US Environmental Protection Agency. Checked 2026-11-21. The accepted RTU label identifies a ready-to-use product, precleaning, general ten-minute visibly wet contact, air drying and protective handling.

Does not establish compatibility with an arbitrary electrical tool. Pathogen-specific shorter claims are not generalized.

S11 Tax Guide for Barbers and Beauty Shops Industry Topics

California Department of Tax and Fee Administration. Checked 2026-11-21. California haircut services are generally not subject to sales tax; providers consume their supplies; retail goods generally are taxable; workspace rent is treated separately.

California only. The case excludes retail and assumes tax-paid purchases. No income-tax or deductibility conclusion.

https://cdtfa.ca.gov/industry/barbers-and-beauty-shops/industry-topics.htm

S12 Recordkeeping

Internal Revenue Service. Checked 2026-11-21. Suitable records and supporting documents for business receipts and expenses.

General federal guidance; no universal retention period or tax-return preparation.

https://www.irs.gov/businesses/small-businesses-self-employed/recordkeeping

S13 Consumer Reviews and Testimonials Rule Questions and Answers

Federal Trade Commission. Checked 2026-11-21. The guidance describes fake reviews, deceptive testimonials and incentives conditioned on sentiment, supporting truthful voluntary feedback.

The course chooses no incentives; does not claim all incentives are prohibited.

https://www.ftc.gov/business-guidance/resources/consumer-reviews-testimonials-rule-questions-answers

S14 2026 Barbering and Cosmetology Act and Regulations

California Board of Barbering and Cosmetology. Checked 2026-11-21. Current-year official compilation for professional scope and health/safety context.

Compilation states legislation through January 2026; current agency pages and later changes need rechecking. No credential conferred.

https://www.barbercosmo.ca.gov/laws_regs/act_regs.pdf

S15 Current active product search BARBICIDE 954 11

California Department of Pesticide Regulation. Checked 2026-11-21. The current California active-product search lists BARBICIDE, EPA 954-11-AA.

Active listing does not replace exact product labeling or confirm every container version.

https://apps.cdpr.ca.gov/cgi-bin/label/labq.pl?activeonly=on&p_chem=1846
