Mobile Welding Separate Decision Answer Key

Work, Money & Place | Local review edition v2 | November 21, 2026

Read only after saving an independent attempt of the fresh decision packet and its requested forms. This separate key supplies fictional teaching reasoning, not practical permission.

Fresh decision practice: Bay D and an unresolved cancellation

Separate answer key DW 014

F02 decision is HOLD. The manager must establish the applicable valid permit, the actual pre-work inspection and post-work requirements, the exposed adjacent-area coverage and an assigned trained watch team. The proposed Taylor assignment does not satisfy the confirmed-training gate. Lee’s 14:00 to 15:00 availability cannot cover a 14:40 last spark plus even the stated 30-minute minimum through 15:10; arrange documented trained relief or a longer assignment, or change the schedule. Unknown permit conditions may require more. An untrained owner is not the fallback.

F05 decision is HOLD for operator protection. Replace the unsuitable oil-marked synthetic outer layer with assessed welding protection, establish the serviceable helmet and marked filter selection for the actual operating range, required underlying eye protection, gloves, coverage, footwear and other assessed PPE. Confirm watcher protection too. The supplied competence fact does not excuse missing protection; this written exercise does not supply a real release.

F09 cannot record start or final closeout. Obtain a manager’s actual release after the corrected PPE, watch training, coverage and inspection gates. Record first/last spark, uninterrupted trained watch through the actual permit period, any relief or extension, responsible post-work inspector and observations. Do not infer closeout solely because a 30-minute timer ends.

F12 initially remains REVIEW: initiation predates request, and a posted date paired with zero amount is contradictory. Neither reduces the confirmed $180 unearned obligation. A supported posted amount and reconciled bank movement are withheld while evidence is unresolved; the record must not close or claim fabrication revenue.

After the corrected chronology and $60 actual debit, the supported refund is $60, remaining obligation is $120 and net bank movement for receipt less retained fee less this debit is $180 - $5.70 - $60 = $114.30. This is an open partial-refund record, with zero earned revenue.

After the additional $120 actual debit, use cumulative posted refund $180 and final posted date November 30. The obligation becomes $0 and the supported net bank movement is negative $5.70. Close the refund record only after the full debit and evidence reconcile. The retained $5.70 is a cost, not unpaid customer liability or earned revenue.
